EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Crochet on Sept. 20, 2005.

The application has been amended as follows:

Cancel all previous claims and insert the following claim:

22). I claim

a snag-resistant fishing weight c comprising:

a smooth elongated substantially heavy, solid metal cylindrical body of substantial length and consistent width about 24 times longer than wide and having a smoothly rounded hemisphere head, terminating'

a first end and an apposite second end with,

a bend along said body, residing nearer said first end than said second end, which defines,

a straight short angled portion, formed of said first end, that is joined by said bend to,

a straight longer, lower portion formed of said opposite second end with,

a hole fashioned through said body at said first end, which resides in part, with said hemisphere head terminating at said first end, and is attached through by,

an o-ring attached to a swivel, whereupon

said o-ring and said swivel are integrally attached to said fishing weight and complete the design of said weight, whereby, a horizontal mode of operation can be accomplished such that said design provides a biasing means for initiating a spin maneuver during retrieval which allows fast, steady retrievals from long cast through stump and brush laden areas of water.

In the specification, delete the last page of the specification and insert the following:

Brief Description of the Drawing

The figure shows the snag resistant fishing weight of the preferred embodiment.

Detailed Description of the Preferred Embodiment

The snag resistant fishing weight includes a long swivel 1. The long swivel 1 is used to connect other fishing apparatus, such as fishing line (not shown), to one of the end of the swivel. The swivel1 prevents line twist. The other end of the long swivel 1 is attached to an O-ring 2. the O-ring is attached to the one end of weight 4 by way of hole 3. Weight 4 includes a short angled portion , a longer portion and an bend portion causing the short angled section to project at an angle from the remaining Long section.

By way of example, specific embodiment would include a 1 inch long swivel 1 and a 3/8-inch O-ring 2. The hole 3 in the short angled portion of the weight 4 would be 1/8-inch in diameter and reside 1/16-inch from an end of the short angled portion. The angle

formed between the two portions of weight 4 would 40 degrees. The weight would be 6 inches long and 1/4 inch in diameter. The weight would be made of iron and weight about 1 1/2 ounces.

The swivel 1, O-ring 2 and weight 4 are integrally attached to each other.
